

А.А. Суслин, "Stability in algebraic K-theory" (1980) - Ас
 И.А. Панин "О стабилизации для ортогональных и симплектической алгебраических K-теорий" Алг. и Анализ, (1989) - Се, Де

- стабилизация для H_i наступает с $\text{sr}(R) + i + \dim M_{\text{sr}(R)+1}$

- для K_i^V — с $\text{sr}(R) + i$

↳ K-теория Вородична

т.е. $K_{i,n}^V(R) = K_{i,n+i}^V(R) = K_i^V(R)$ для $n \geq \text{sr}(R) + i$

$$H_i(GL(n, R), \mathbb{Z}) = H_i(GL(n+1, R), \mathbb{Z}), \quad n \gg 0$$

R — коммутативное ассоциативное с 1, $\Phi_n = (C_n, D_n)$

$$W(C_n) = S_n \ltimes (\mathbb{Z}/2\mathbb{Z})^n$$

$$W(D_n) = S_n \ltimes (\mathbb{Z}/2\mathbb{Z})^{n-1}$$

$$G(C_n, R) = Sp(2n, R), \quad G(D_n, R) = O(2n, R)$$

$$E(\Phi_n, R) = \langle e_\alpha(\xi), \alpha \in \Phi_n, \xi \in R \rangle$$

$$St(\Phi_n, R) = \langle X_\alpha(\xi), \alpha \in \Phi_n, \xi \in R \rangle / \text{Rel}$$

$$\pi_n: St(\Phi_n, R) \longrightarrow G(\Phi_n, R)$$

$$X_\alpha(\xi) \longmapsto e_\alpha(\xi)$$

$$Im(\pi_n) = E(\Phi_n, R)$$

$$K_1(\Phi_n, R) = \text{Coker}(\pi_n) = G(\Phi_n, R) / E(\Phi_n, R)$$

$$K_2(\Phi_n, R) = \text{Ker}(\pi_n)$$

$$\Phi_n \hookrightarrow \Phi_m, \quad n \leq m$$

$$\mathcal{X} = G, E, St, K_1, K_2$$

$$\sim X(\Phi_n, R) \longrightarrow X(\Phi_m, R)$$

$$X(\Phi_\infty, R) = \varinjlim X(\Phi_n, R)$$

- 1) $St(\Phi_\infty, R)$ — универсальное центральное расширение $E(\Phi_\infty, R)$
- 2) $E(\Phi, R) = [G(\Phi, R), G(\Phi, R)]$
- 3) $E(\Phi_n, R)$ совершенна для $n \geq 3$

$S \subseteq \Phi_n$ - ^{замкнутое} связное подмн-во: (a) $\alpha \in S \Rightarrow -\alpha \notin S$;

$U(S, R) = \langle y_\alpha(\xi), \alpha \in S, \xi \in R \rangle$ (b) $\alpha, \beta \in S, \alpha + \beta \in \Phi_n \Rightarrow \alpha + \beta \in S$
 $\bar{U} = \text{St}$ y - это либо e , либо x

$\bar{U}(S, R) \xrightarrow{\pi_n} U(S, R)$

$w \in W(\Phi_n) \quad U(\Phi_n^+, R)^w = U(w^{-1}(\Phi_n^+), R)$

$W(G, \{G_i\}_{i \in I}) \quad (g_0, \dots, g_p) \quad g_i \in G$
 $G_i \leq G \quad \exists i \in I: \forall j, k \quad g_j, g_k^{-1} \in G_i$

$X = G, E, \text{St}$

$V(X(\Phi_n, R)) = |W(X(\Phi_n, R), \{U(\Phi_n^+, R)^w\}_{w \in W})|$

$\Phi_n \hookrightarrow \Phi_m \rightsquigarrow V(X(\Phi_n, R)) \hookrightarrow V(X(\Phi_m, R))$

$V(X(\Phi_\infty, R)) = \varinjlim V(X(\Phi_n, R)) \quad // X \neq \text{St}$

$i \geq 1 \rightsquigarrow K_i^V(\Phi_n, R) = \pi_{i-1} V(G(\Phi_n, R))$

$K_i^V(\Phi_\infty, R) = \varinjlim K_i(\Phi_n, R)$

$K_1^V(\Phi_n, R) = G(\Phi_n, R) / E(\Phi_n, R)$

$V(\text{St}(\Phi_n, R))$ - универсальное накр. пр-во $V(E(\Phi_n, R))$

$K_2^V(\Phi_n, R) = \ker(\text{St}(\Phi_n, R) \xrightarrow{\pi} E(\Phi_n, R))$

$K_i^V(\Phi_n, R) = \pi_{i-1}(V(E(\Phi_n, R))) = \pi_{i-1}(V(\text{St}(\Phi_n, R)))$

$i \geq 3, n \geq 3$

$\bar{E}(\Phi_n, R) = E(\Phi_\infty, R) \cap G(\Phi_n, R)$

$\bar{\text{St}}(\Phi_n, R) = \pi^{-1}(E(\Phi_n, R))$

$\rightsquigarrow V(\bar{\text{St}}(\Phi_n, R)) \hookrightarrow V(\bar{\text{St}}(\Phi_m, R)) \quad n \leq m$

$V(E(\Phi_n, R)) = V(\bar{E}(\Phi_n, R)), \quad n \geq \dim(R) + 2$

- поскольку для K_i есть стабилизация
